PROFILE

Software Engineer with a full-stack background spanning web and mobile development, cloud infrastructure, AI/computer vision, and embedded systems. Built an e-commerce platform that is still live and growing every day (1,500+ customers), and delivered complete systems end-to-end — including a full hardware-software IoT product. Quick learner who takes initiative, communicates clearly with customers and teammates, and owns projects from design through deployment. Actively seeking a full-time position to contribute to meaningful products and grow within a strong engineering team.

EXPERIENCE

Software Engineer — HasoubLabs *2026 – Present*

- Design, build, and deploy an AI-powered platform end-to-end on AWS, following Agile/Scrum practices with FastAPI for the service layer.
- Own the CI/CD pipeline for the platform — automating build, test, and Kubernetes deployment stages with Helm to ship changes safely and frequently.
- Build and evaluate RAG pipelines (retrieval, embeddings, hallucination guardrails), and deploy AI agents with tool-calling via a Model Context Protocol (MCP) server for service integration.
- Define automated testing and evaluation gates for AI-system behavior, catching regressions before they reach production.
- Work full-stack on the platform — building frontend interfaces alongside the FastAPI backend and AWS infrastructure that supports them.

Manager & Lead Software Engineer — ZAYNKAR (E-commerce Startup), Israel *2024 – 2026*

- Built an e-commerce platform from scratch and led its end-to-end development and technical operations — frontend and user-facing features, backend services, databases, deployment, and maintenance.
- The platform is live and still in use, with the customer base growing every day (1,500+ customers to date).
- Handled software testing, debugging, customer technical support, and continuous improvements to reliability and user experience.
- Translated customer and supplier requirements into practical product improvements; coordinated operational workflows and relationships with international suppliers.

EDUCATION

B.Sc. Software Engineering — Braude College of Engineering, Karmiel, Israel *2021 – 2025*

Relevant Coursework: Algorithms for Texts & Sequences (100) · Network Data Analysis (100) · Advanced Web Technologies (88) · Cloud Computing (89) · Intro to Security & Cryptography (83) · Human-Computer Interface / UI-UX (92)

Kav Mashve Program (2022 – 2025) — professional development and career acceleration program for engineers.

AI Engineer Accelerator (Course) — HasoubLabs *2026*

PROJECTS

Real-Time AI Safety Monitoring System

- Developed and deployed a smart PPE-compliance monitoring system using YOLO, OpenCV, and Norfair for real-time object detection and person tracking.
- Engineered the full computer vision pipeline for high processing throughput, integrated with a backend infrastructure for automated alerts and incident logging.
- Tested with 56 users across real construction/work-site scenarios, with high success rates in detecting compliance on safety gear.

Automated Animal Feeding Machine (IoT / Embedded)

- Designed and built a hardware-software feeding system combining SolidWorks-modeled mechanical parts with multiple motors and embedded C/C++ (with Python/MicroPython for auxiliary logic) on an M5Stack controller.
- Implemented per-animal ID recognition so the machine identifies which animal is present and automatically dispenses that animal's own preset schedule and portion size, keeping the feeding door locked unless it's that animal's turn to eat.
- Built a companion analytics dashboard and mobile app tracking per-animal feeding activity — which animal ate, where, how much, calorie intake, and timing — so owners can check in and stay reassured while away from home.
- Implemented remote control via a dedicated UI, enabling scheduled dispensing and live status monitoring — demonstrating end-to-end IoT development.
- Piloted with around 20 animal owners/breeders across different animal types at home, with strong results that led several to request their own units.

Academic Projects (Full-Stack, Databases & APIs)

- Completed multiple academic projects covering database-driven applications (SQL & NoSQL), REST API design and integration, and modern UI/UX interfaces built with React and Figma.

TECHNICAL PROFICIENCIES

Languages: Python, JavaScript, TypeScript, Java, C/C++, Go, SQL, Bash, HTML, CSS

Full-Stack & Mobile: React, Next.js, Node.js, FastAPI, REST APIs, Mobile App Development; PostgreSQL, MongoDB, Firebase

AI & LLM Engineering: LLM Agents & MCP, RAG, Prompt Engineering, AI Evaluation & Guardrails

Computer Vision & Hardware: YOLO, OpenCV, Norfair, SolidWorks

Cloud & DevOps: AWS, Docker, Kubernetes, Helm, CI/CD (Jenkins), Linux

Testing & Tools: Git, Agile/Scrum, Unit Testing, API Testing (Postman), Test Case Design, Debugging, JIRA, Networking Fundamentals

LANGUAGES

English: Fluent · Hebrew: Fluent · Arabic: Native
